

# Decimal Game

Pick a goal number. For instance we pick 30. Roll the 3 dice and the players write down the three numbers in any order. Then the decimal point goes immediately after the first number. Step 2 is to roll the dice again, again each player writes down the three numbers in any order and place a decimal after the first digit. Now add the 2 numbers together and get a new number. Repeat the process until someone reaches 30 without going over.

Step 1: roll the dice. Lets assume the dice are 1,2,3. Lets write down 3.21  
Step 2: roll the dice. Lets assume the dice are 4,5,6. Lets write down 6.54  
Step 3: add the two numbers and get..... 9.57  
Repeat this process until someone reaches 30 without going over.
